REASON

What is the reason for not joining e164.arpa?

Country code not delegated in e164.arpa

e164.arpa. not operational

other reason, please specify: 5.5.e165.arpa is delgated to registro.br, but they do not delegated "subdomains" bellow 55.

---

What are the plans concerning e164.arpa in your country? Is there a "roadmap" for starting an ENUM trial (or commercial service) under e164.arpa?

Registro.br is studying what to do. They don't know how to delegate prefixes. One of the reasons is the way telephony portability is implemented in Brazil.
